10/1/60

Thank you very much for an interesting and
informative treatment.

I suspect the problem will be aggravated in the
future ~~for~~ on several accounts:

- 1) hardening of attitudes on imposition of canonical laws
as a by product of this election campaign
- 2) progress in experimental genetics that may allow
reasonable prediction of offspring with congenital defects.

We have the necessary basic information to do this
now for mongoloid idiosyncrasy at 6 months gestation or less;
actually before this could be verified a substantial number
of induced abortions would have to be studied and this
may be decided to practice in Sweden before it can be here.

Why don't we have lunch together some Monday noon?

H. Packer

John Lederberg.
